

APPENDIX.

In the following appendix are arranged, under the names of the several States, such facts in regard to the deficiencies of the schedules as seemed necessary to enable the reader to form correct conclusions from the text, and to make such corrections as were not within the sphere of the office. Only what was found upon the face of the schedules has, of course, been aggregated in the work.

Wherever any typographical error, or error in the calculations, has been discovered—in all perhaps a dozen or twenty—in any of the detailed statistics of the volume, they have very generally been corrected in the aggregate tables in the introductory part, and are pointed out among the notes which follow, upon the States. In many cases they are corrected in the largest part of the edition.

After the most careful proof-reading by two sets of persons, there is room still for error in the final revision of the printing office, or even in the falling out of type in the press-room, supposing every other chance of error removed. It is due, however, to the printers to say, that they have spared no pains on the work, and that they have in every way co-operated with the office, carrying the work through in a period of time unprecedentedly short.

The orthography of the tables is based upon the returns, so far as to give local usage; but the latest Maps, Gazetteers, and Post Office Register, have been consulted in order to correct errors of the officers.

To avoid repetition in the notes on the individual States, it is thought proper to insert here, by way of anticipation, a few remarks on some of the tables, which are applicable to the States generally.

TABLE II.—In the New England, Middle, and Western States, counties are divided into several civil divisions—generally cities, towns, and townships—and the assistant marshals have, in most instances, made definite returns of the population for each of these. The table of "Subdivisions" shows, as far as practicable, these details of the population. In some of these States many towns and villages are returned by the officers as situated in, and belonging to, certain townships. In order to show the population and proper locality of these, they have been placed on a short line under their respective townships. It will be observed that the population given opposite the name of the township in such cases is only the portion not included in its town or towns. The aggregate table of "Subdivisions" for the United States, however, gives opposite to each Civil Division its entire population—notwithstanding portions of it may be stated independently. The returns for the Southern States, except Arkansas, do not show any complete system of subdivision of counties; accordingly, the table has been confined in these cases to a mere statement of the population of such cities and towns as are ascertained upon the schedules. Even this table will show many omissions, consequent upon the vague and indefinite mode adopted by many of the officers in their returns.

TABLE VII.—In several of the States there seems to be no general Public School System, some particular counties or localities supporting public or free schools by taxes levied within their own limits. The different modes in the several States involve so much confusion in the returns, that any accurate distribution of them, as to public or private, has been found impracticable. The plan adopted has been to arrange those schools showing taxation as a source of income (with some exceptions as to academies) in the table of public schools. Deficiencies of income will be frequently observed in the table of academies and other schools. In some cases this is owing to the income of all schools being returned in one amount, and consequently the revenues of private schools, which are generally the smallest number, are left blank. Another cause of these deficiencies is, that institutions of this character derive their chief support from tuition fees; and as there was no such definite head on the schedules, that of "Other sources" being intended to include it, it has no doubt been frequently overlooked by the officers. Probably, also, there has been sometimes unwillingness or inability to give revenues of this kind.

TABLE X.—In the construction of these tables it was deemed advisable to follow as closely as possible the returns of the assistant marshals, notwithstanding some difficulties occurred which seemed to require a greater condensation of the headings. The principal one arises from the fact that frequently two or more occupations are united under one general business, in which case the assistant marshal generally returns the individual as following that particular employment which is the most common or important, and consequently the incidental pursuit is not shown in the table. An enumeration of some of these headings which might have been condensed, will at once show the mode of rendering them consistent, viz: "Cabinet and chair makers," and "Undertakers;" "Carpenters," "Joiners," and "Builders;" "Clock and Watch makers," and "Jewellers;" "Copper and Tin smiths;" "Dairymen" and "Milkmen;" "Drivers," "Carriers," and "Teamsters;" "Machinists" and "Engine manufacturers;" "Plough makers" and "Agricultural Implement makers;" "Refractory-keepers," "Bar-keepers," &c.; "Lath, Shingle, and Stave makers;" &c., &c. Another apparent discrepancy results from the fact that frequently one individual has two distinct pursuits, or a regular and incidental occupation. This case includes almost all holders of small offices, whose regular pursuit is given by the assistant marshal, but whose official occupation is lost. This will account for the small number of "Bank officers," "Insurance Company officers," "City, county, and town officers," &c., &c. A third difficulty is, that the officers have frequently returned the employés and operatives of large manufacturing establishments as "Laborers," and consequently the "Factory hands" are not sufficiently represented in the tables. To supply this deficiency, there is attached to each of the tables a brief statement of the numbers of male hands employed in several of the leading interests, as shown by the Industrial Schedules.

The Agricultural sheets of the United States, as condensed in the tables, whilst they do not undertake to give all of the agricultural productions, may be said to give a very fair idea of the results for the country in 1850. They have not been compared with other sources of information, of which there are a great many, public and private. The figures will not stand a very close examination; but they are exactly as the assistant marshals returned them, with the exception of Hemp. There were many difficulties in regard to this item. The assistant marshals, in a great many instances, made returns of tons when it was evident they meant pounds; and oftentimes placed figures in the column of hemp when they should have been placed in one of the adjoining ones. Letters were addressed to the officers in such cases, as well as to individuals who it was supposed could give information on the subject. The tables as they stand were corrected in accordance with the replies received. In the States of Indiana and Illinois the returns were so confused, and all information from other sources so vague and indefinite, that it was deemed advisable to strike the items of Hemp from the Agricultural tables of those States.

By "Unimproved land" is only meant land connected with the improved, and in some sense necessary to its enjoyment, whether enclosed or not. There is, however, one exception to this, in Franklin county, Florida, where the schedules show 472,000 acres of unimproved land—the property of two individuals—and none improved.

TABLE XIV.—There are a great many deficiencies of accommodation and income in the returns of churches, church property, &c. All the churches shown on the schedules have, however, been placed in the table, and the omissions not evident there have been pointed out in the notes which follow. Under the head of "Free" are included those churches which are open to the use of all or several religious denominations.

NOTES ON MAINE.

TABLE II.—POPULATION BY SUBDIVISIONS OF COUNTIES.—In this State, besides the general subdivision of counties into cities, towns, townships, etc., the returns made by the assistant marshals indicate a large number of small divisions under several general names, such as "Plantations," "Grants," etc. Some townships, also, with a limited population, are returned without any distinctive appellation beyond a description by numbers, letters, and ranges. Thus, in Aroostook county, "Deerfield Academy Grant" is returned with a population of 12; "Township No. 12, range 5," population 11; "Letter E, range 1," population 46. As these divisions are oftentimes confused upon the returns, and are so unimportant in extent, it has been deemed advisable to throw all of them in each county under one general designation, viz: "Settlements;" a term which is found to have been used in the early compilation of the work, and which seems sufficiently comprehensive and descriptive. Under it is included all the population of the counties not given under the other specific headings.

TABLE VII.—COLLEGES, ACADEMIES, SCHOOLS, ETC.—*Aroostook county*. 3 public schools, having 3 teachers and 111 pupils, are returned without income. *Cumberland*. 1 college, 6 teachers, 60 pupils; no income: 2 private schools, 2 teachers; no pupils nor income: 1 academy; no teachers, pupils, nor income. *Franklin*. 1 private school, 20 teachers; no pupils nor income. *Hancock*. 41 teachers of public schools, 1,707 pupils; no number of schools nor income: 1 private school, 10 pupils; no teachers nor income. *Lincoln*. 1,400 pupils in public schools, \$1,890 income; no number of schools nor teachers: 12 teachers in public schools, 358 pupils, \$529 income; no number of schools: 1 academy, 2 private schools, 4 teachers, 105 pupils; no income. *Oxford*. 2 public schools, 55 pupils; no teachers nor income. *Penobscot*. 1 academy, 1 teacher, 50 pupils; no income. *Somerset*. 1 private school, 1 teacher; no pupils nor income. *Waldo*. 2 private schools, 2 teachers, 50 pupils; no income. *Washington*. 13 public schools, 577 pupils, \$987 income; no teachers. *York*. 11 private schools, 11 teachers, 305 pupils; no income.
